
NEW JERSEY BEEKEEPERS

ASSOCIATION NEWS

VOL 22 ISSUE 1

DEC/JAN 08

Seasons Greeting

As the days are shortening it seems like time is speeding on us...4 H fairs are now only fun memories, farmers markets are over, fall craft shows are leaving the stage to Christmas ones, Thanksgiving is already gone and some of us even experienced our first snow! We are for sure "en route" for winter. Fall has been great apart from an epidemic of American Foul Brood. I heard that a lot of you have been touched as well. Thank you to Bob Hughes, who is back with the Agricultural Department on a part time basis, for his phone calls to let us know and give us directions on how to react. Now, we just have to keep our fingers crossed and hope for the best!

Since we are going to enter the "down season", this will give us plenty of time to get ready for the state honey show. It is very important for our association to showcase our products at the Agricultural Convention which will take place in Cherry Hill February 4-6, 2008. So please, get to work and enter the state show. The rules are very simple and will be on the NJBA web-

site very soon if not already. The Executive Board meeting will take place in Trenton on January 31, 2008 at 7:30 so you have until that date to remit your entries to one of your branch officers so Tim Schuler can take them down to the show.

Like every year, our winter meeting will take place on February 9th at La Grange. Tim and I are still working on the agenda as we speak. Make sure you read the proposed amendments to our association bylaws included in this issue of the newsletter since you will be asked to vote on them. This meeting will also be the opportunity to go home with a yellow, red or even a blue ribbon if you entered your products in the show. If you did not, you will be able to purchase 1st place products which will be auctioned after lunch that day as well.

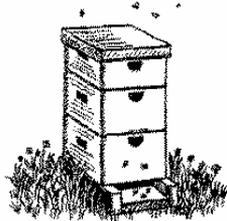

I just would like to close this column in wishing every one of you and your loved ones a Merry Christmas and a very happy beginning of the New Year. I am looking forward to seeing you at the winter meeting.

ENTRIES FOR THE SHOW

Show Rules State; Entries may be delivered to a member of the NJBA Executive Board (these are state officers, branch presidents and secretaries) or any person attending the last Executive Board meeting (Jan. 31, 2008) prior to the State Honey Show, (Feb 4,5,6 2008) or delivered directly to the show prior to judging. If the entries are not delivered directly to the show by the exhibitor, the exhibitor should provide a list of their entries, which will be consolidated at the Executive Board meeting where the entries are collected, to insure that all entries are accounted for prior to judging.

For a complete set of the State Rules; The rule are on the NJBA Web Site under calendar, click on calendar, then click here for current rules. If you don't have access to the web site and would like a hard copy of the rules mailed to you, contact me at 609-259-7457.

Report from the Apiarist

Well its almost Thanksgiving. Your bees should be put to bed for the winter. Mouse guards in place, inner cover deep side down, top ventilation, brick or stone on top of outer cover to keep the lid from blowing off. I hope you have 60 lbs of honey in each colony for winter feed. Now we'll wait till spring to see how well you did treating for mites and feeding in preparation for winter. Overall Both Bob Hughes and I think the colonies we saw this past month are in good shape, they seem to be 'fat' and the mites weren't detectable. Winter is the time to prepare honey for the state honey show. Everyone can enter the state honey show; in this show you're able to proudly display your label on the jars. Hopefully we'll be able to fill all 3 display cases. Contact your branch president or me and we'll make sure your entry gets entered. You should also be planning on what equipment you will need for next year, and get it ready.

I would like to wish all of you a very happy Thanksgiving and Holiday Season. Please contact me with any questions you may have, 609-462 7820, or Tim.Schuler@ag.state.nj.us.

Bee--ginners Beekeeping

A three day course will provide the necessary information needed for new beekeepers to start and care for a honey bee colony. It will be at the Rutgers EcoComplex in Bordentown N.J.

Course code: # AE0401CA08

Daily schedule;

Date	Start time	End time
4/10/2008, Thu.	9:00am	3:30pm
4/11/2008, Fri	9:00am	3:30pm
4/12/2008, Sat	9:00am	3:30pm

Early registration fee-\$150.00

Letter from the editor

I hope everyone saw the silence of the bees on WNET thirteen ,a PBS broadcast. It was very informative to both the beekeeper and the general public. It showed how the consequences of CCD could be disastrous, with the loss of tens of billions on bees lost. The loss could American Agriculture eight to twelve billion dollars. News like this has brought a lot of attention to the honeybee, and maybe to the future of our diets.

These tireless little creatures the Honeybee not only produce honey pollinate about one-third of our crops. They pollinate crops for not only our diets but animal feeds too. Honeybees pollinate about one-hundred flowering plants which need bees to survive. On the Program they showed a place in China where there were no bees. They had to pollinate the plants by hand very time consuming using a feather duster. So if we lost all the honeybees could we lose these crops?

We're not their yet, `luckily, but researchers and beekeepers are taking steps so the bee population doesn't plummet. Beekeepers have to take steps to keep bees as healthy as possible . You have to reduce stress and improve nutrition.

Commercial beekeepers have been hauling bees up and down, and from coast to coast to follow the growing season for their pollination services. Maybe the constant moving about places undue stress on the bees and some crops are not very nutritious for the bees.

Mother nature has other natural pollinators but the problem with using other pollinators is that today's agri-

culture has grown to large. U.S. agriculture has a huge demand for pollination and honeybees have been the ideal pollinator for crops. Honeybees don't perform all this naturally but need the help of beekeepers, to haul them from state to state, and keep them nourished and healthy for their pollination service.

With the threat of CCD the USDA has researchers starting to study other pollinators, like the bumblebee. Bumblebees share many similarities with the honeybees. The biggest difference is cost. Bumblebees only last two months and cost about \$200 per hive, and honeybees cost about half. The use of bumblebees' pollination is used only on high-value crops.

If you didn't get a chance to watch it, check your local listings or go to **PBS Nature's** web site.

On the lighter side, don't forget about the state honey show in Feb. So let's get that honey in the jars and don't drink all that mead save a bottle for the show. We have to fill those three display cases.

In closing I would like to wish each of you a Happy Holiday and a prosperous New Year.

Your editor,
Angelo Trapani

CONSTITUTION and BYLAWS

Changes in the by Constitution and Bylaws will be read and voted on at the next membership meeting in February.

Proposed Amendments to the Constitution and By-Laws of the New Jersey Beekeepers Association, Inc.

These proposed amendments were approved unanimously by the Executive Board of the NJBA at their May 25th, 2007 meeting in Trenton. The proposed amendments will be submitted to the membership for ratification at a subsequent Association meeting held not less than sixty days (60) after publication of the proposed amendments in the New Jersey Beekeepers Association Newsletter. To become effective the amendments must be approved by at least 2/3 vote of the members present at that Association meeting.

The amendments are:

Constitution: Article I, Section 2: to read as follows:

1

The mission of the Association is to Promote and support all aspects of beekeeping in New Jersey

Educate the general public about

the benefits and importance of bee-keeping

Dispel myths and misinformation concerning the honey bee

Inform & educate the general public concerning the honey bee and the beekeeping industry

Comment: This mission statement was posted in the Dec/Jan and Feb/Mar 2005 newsletters and was voted on by the general membership at the 2005 Winter meeting.

The original text read: "The object is to promote the general interest in and the pursuit of bee culture."

Constitution: ARTICLE IV, Section 1 to read as follows:

The Executive Board shall consist of the President, the three vice-presidents, the Secretary Treasurer, the last two Presidents, all current Branch Presidents and one Secretary from each Branch, the New Jersey Department of Agriculture Apiary Inspectors and Chairperson of all Committees.

Comment: Some Branches have split the position of secretary into two: recording and corresponding secretaries. The original language of the By Laws did not anticipate this, but clearly assumed there would be two Branch delegates to the Executive

Continued on page 7

Board: a single president and a single secretary. This clears up the confusion and permits each branch to determine which secretary to send to the Board

Further, the original text included as a member of the Board “the Professor of Entomology at Rutgers University” which historically was the member of the Rutgers faculty actively involved in Bee Research. That position has been vacant for some time.

The original text read: The Executive Board shall consist of the President, the three vice-presidents, the Secretary Treasurer, the last two Presidents, all current Branch Presidents and Secretaries, the New Jersey Department of Agriculture Apiary Inspectors, the Professor of Entomology at Rutgers University and Chairperson of all Committees.

3. Constitution: ARTICLE V - Election of Officers, Section 1 to read

The President, three Vice Presidents, and the Secretary Treasurer shall be elected at the annual meeting, assume office at the end of the annual meeting and hold their offices until their successors have been elected. No member shall hold the same office for more than two consecutive years, other than the Secretary Treasurer. However, if at the time of election there are no nominees for a position due to become vacant due to the term limits described herein, the membership may decide, by majority vote, to extend the tenure of the incumbent officer. If there are any nominees for the position the incumbent must

step aside.

Comment: The added text is underlined, and is intended to allow for the continuation in office of an officer that would normally be prohibited from holding office again, unless there is a seconded nomination of an eligible successor.

By-Laws: ARTICLE I – Membership, Section 1 to read:

There shall be four categories of membership: Junior, Individual, Family, Honorary.

The original text read:

There shall be four categories of membership: Junior, Regular, Husband and Wife, Honorary.

By-Laws: ARTICLE I – Membership, Section 3 to read:

A Family membership will be \$20.00 per year, payable in advance.

The original text read:

A Husband/Wife membership will be \$20.00 per year, payable in advance.

By-Laws: ARTICLE II – Dues, Section 5 to have the underlined portion below stricken from the By-Laws:

No new members will be accepted a Life Members. Current Life Members will continue to

receive all membership benefits without payment of annual dues. The funds in the Life Membership Fund will be transferred to the New Jersey Beekeepers Association General Account from which an annual distribution to the appropriate Branches will be made for each Life Member. The amount will be equal to the Branches proportionate share of member's dues. This will continue for the life of each current Life Member.

Comment by the Treasurer- this reference is to a "Life Membership Fund" which does not appear to be reflected anywhere in the financial records of the Association, and I have been informed that this procedure has not been followed. Therefore I recommended to the Board that it be removed from the By-Laws. The number of life memberships is not large, and the option of selling life memberships has been prohibited by prior changes to the By-Laws, so the fiscal impact on the Branches has not been significant.

Respectfully submitted by
Secretary C. Crowell

BEE MAIL

“Bee Movie” Promotional Materials Available – Order Now!

Don't miss out on an incredible opportunity to tie in with “Bee Movie,” a major animated movie from Dream-Works Animation featuring Jerry Seinfeld. The movie will be in theaters this November.

NHB has created “Bee Movie” promotional materials for producers and packers to use at retail and farmers markets. The materials feature graphics from the movie and a 100 percent pure honey message. Promotional materials include:

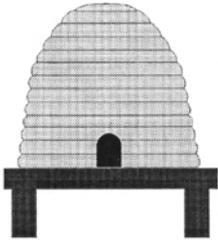

- Hang tags
- Jar/Container Neck Hangers
- Stickers
- Table Signs

The materials must be used between Sept. 1 and Dec. 31. For pricing and ordering information, call NHB at 1-800-553-7162.

New “Honey Time” Web Site with a “Bee Movie” Theme - Check It Out! NHB has launched a colorful new web site, featuring graphics from the “Bee Movie.” The site includes a link for kids with honey snack ideas and “Real Bee Facts” and a link for Moms with honey beauty tips and recipes. The site has links to both the “Bee Movie” and NHB. <http://www.honey.com/beemovie/>

How to Reduce Bee Poisoning from Pesticides

By D.F. Mayer, Ph.D., Washington State University Cooperative Extension entomologist, Prosser;

C.A. Johansen, Ph.D., Washington State University Cooperative Extension entomologist, retired

and C.R. Baird, Extension entomologist, University of Idaho

CAUSES OF BEE POISONING

Most bee poisoning occurs when insecticides are applied to crops during the blooming period.

Other hazards are,

- Drift of toxic pesticides onto adjoining crops or weeds that are in bloom.
- Contamination of flowering cover crops when orchards are sprayed.
- Insecticidal dusts adhere to foraging bees and ultimately become packed with the pollen onto the hind legs.

Pennacp-M and Sevin are especially dangerous because they may be stored with pollen and kill newly emerged workers the following season.

- Bees drinking or touching contaminated water on foliage or flowers.
- Bees collecting contaminated pollen

BEE POISONING SYMPTOMS

The most common symptom of bee poisoning is the appearance of excessive numbers of dead bees in front of the hives. Another common symptom is lack of foraging bees. Aggressiveness in bees may be caused by most pesticides. Stupor, paralysis, and abnormal activities of bees are commonly caused by chlorinated hydrocarbons and organophosphorus insecticides. Regurgitation of the honey stomach contents is often caused by poisoning with organophosphorus insecticides. Bees may perform abnormal communication dances on the horizontal landing board at the hive entrance while under the influence of insecticide poisoning. Disorganized behavior patterns may lead to lack of recognition of affected field bees by guard bees.

Many bees poisoned with Sevin or dieldrin slow down and appear as though they had been chilled; such bees may

take two to three days to die. Beekeepers familiar with Sevin poisoning quickly learn to recognize the "crawlers" that move about in front of the hive but are unable to fly. Dead brood in or in front of the hive is typical of Sevin, microencapsulated methyl parathion (Pennacp-M), or arsenical poisoning. When not enough hive bees are left to cover the brood frames or care for the brood, desiccation or starvation kills the larvae. In severe cases, few bees in the hives survive, or the entire colony may be dead.

One forager returning to hive with a load of contaminated pollen or nectar can cause extreme agitation and death of a number of bees. Several such foragers can seriously disrupt and damage the colony. Often, the queen is superseded because of the agitation of the workers, possibly aggravated by a reduction in the secretion of queen substance.

Queens may be affected, especially by slow-acting materials such as arsenicals, Sevin, and microencapsulated methyl parathion (Pennacp-M), which may be taken into the hive with pollen. Queens may behave abnormally: for instance, lay eggs in a poor pattern. Severely weakened or queenless colonies will not live through the following

winter. Queenlessness the following fall have been associated with the use of a wide variety of insecticides including arsenicals, Pennacp-M, Sevin, and parathion. Typically, severe Sevin or Pennacp-M poisoning makes at least half of the colonies

Part one of a continuing series.

<p>FOR IMMEDIATE RELEASE November, 2007</p>	<p>Contact: Troy Joshua (800) 328-0179</p>

**CENSUS GIVES PRODUCERS A VOICE IN THEIR FUTURE
2007 Census of Agriculture Coming Soon**

Trenton, New Jersey – America’s producers will soon have the opportunity to make their voices heard and help shape the future of agriculture for years to come.

Continued on page 13

That opportunity will come to their mailboxes in the form of the 2007 Census of Agriculture.

Conducted every five years by the U.S. Department of Agriculture, the Census is a complete count of the nation's farms and ranches and the people who operate them. The Census looks at land use and ownership, operator characteristics, production practices, income and expenditures and other topics. It provides the only source of uniform, comprehensive agricultural data for every county in the nation.

"The Census of Agriculture provides information that is not available anywhere else – information that benefits agricultural producers and their communities in myriad ways," said Troy Joshua, director of the New Jersey Field Office of USDA's National Agricultural Statistics Service (NASS).

"For instance, policy-makers factor Census data into decisions concerning agricultural and rural programs. Community planners use Census to target needed services to rural residents. Companies rely on Census data when determining where to locate their operations. And producers themselves can use Census data to help make critical decisions about their businesses," he explained.

NASS will mail out Census forms on December 28, 2007 to collect data for the 2007 calendar year. Completed forms are due by February 4, 2008. Producers can return their forms by mail or, for the first time, they have the convenient option of filling out the Census online via a secure web site.

"We're committed to making this Census the best count ever. It's about the future of agriculture and rural communities in our state," Joshua said.

"Regardless of how large or small their operation is or what kinds of products they produce, New Jersey producers will help themselves and their communities by filling out the Census of Agriculture and returning it promptly," he added.

"We want producers to know: the Census of Agriculture is their voice, their future and their responsibility."

For more information about the 2007 Census of Agriculture, please contact the NASS New Jersey Field Office at (800) 328-0179 or visit www.agcensus.usda.gov online.

###

Fall NJBA Membership Meeting

On Saturday Oct. 13 the NJBA Membership Meeting was held at the Eco-Center in Columbus, N.J. It was a great meeting hosted by CJBA Chapter. Lots of thanks to Ed Kosenski for getting the speakers and setting up the program, plus many thanks to all the members of CJBA who helped out to make this a successful meeting.

Vice President Pete Leighton called the state meeting to order. The minutes were read new and old. The committee Chairpersons read their reports. Pete also stated that the Newsletter has a new editor (Angelo Trapani) and he thanked Vic Ammos for his many years of service for which he got a big hand.

He introduced Dr. Hamilton, the new head of Entomology at Rutgers. Dr. Hamilton said he will be eager to work with the beekeepers in the state and with all the news about CCD lots of federal funding has become available. He also was given the OK to hire a faculty member to work with him on honey bees. He hopes this will happen by the latest July 1, 2008. His assistant's base of operation will be at the Rutgers's Farm in Cream Ridge off Rout 539. Dr. Hamilton will be needing our help into looking at different pesticides and crop profiles. He wants to determine problems and solve them, to put together a document to justify grant money.

Dr. Hamilton was questioned on pesticide licenses and said that anything with an EPA number you needed a license to purchase and to apply. Any natural product without an EPA# you didn't need one. The Dep's web site has a list of registered pesticides under " search products."

Our new state Apiarist, Tim Schuler was introduced. He has been on the job officially since Aug. 20. He has been working out in the field looking at bees and has found some AFB, pesticide kills, starvation, aggressive colonies

and mites. He told us that if you call him with a problem he will respond and help out in solving your problems. Bob Hughs has been helping Tim out and will continue into next year.

The next part of the meeting was Hosted by CJBA, with our own President Len Klinker introducing our two guest speakers Dr.Dr. Rachael Winfree.

Thomas Seeley and Dr.Thomas Seeley one of our featured speakers spoke on 2 topics, one before lunch and the other after lunch. Dr. Seeley is the scientific adviser for the new bee movie coming out in Nov.

His first topic was **House hunting by the honeybee**, which is a consensus group discussion. He had a power point presentation with many animated slides, showing how potential sites were selected with the waggle dance, indicating direction by the angle and distance with the duration of the dance. He observed a test swarm for over 16 hours, with scout bees (3 to 5%) of the cluster come to a consensus with different quorums at the possible sites, and finding the optimum site.

His conclusion came to 3 points

1. Scouts search anonymously and report freely.
2. Scouts conducts an open competition among opinions and vote independently.
3. Scouts use quorum sensing with moderate quorums.

After lunch his topic was plastic foundation versus the old standard Beeswax.

Some of the advantages of plastic comb were, they were easy to construct and strong, but did hinder comb building and lowered honey production. The study consisted of 24 colonies in which he found that plastic comb did hinder comb building, it hindered the colonies weight, and honey production in some of the colonies. In the study he had to find what promoted comb building. He found middle age bees built comb, and the trigger for the bees to build comb was when the bees run out of storage space (80% full) and then they built new comb.

Jean's Honey, Inc.

**NJ - NY - PA - Honey in
60 lb. Pails**

**Cut Comb Honey
NJ Nucs Available
in Spring**

George Schaefer

(908) 782-7912

www.jeanshoneyinc.com

He concluded that with no storage space they must build comb and yes you can use plastic comb but use it with care.

Our other featured speaker was Dr. Rachael Winfree. Her research on crop pollination found out how, native bee ecology, the use of land, and future development can affect our food supply. 76% of crops depend on animal pollination which consists of 35% of our food supply. 62% is pollinated by wild bees and 38% by honeybees.

In her research she studied melons on farms in our area which are pollinated by both wild bees and honeybees. She showed us how different bees pollinated flowers with different counts of pollen grains left on female flowers.

You can contact Dr. Winfree
609-258-6228

MEET TIM SHULER NEW JERSEY STATE APIARIST

TIM

A 21-year veteran of the New Jersey Department of Agriculture is trading cows, sheep and pigs for a decidedly more delicate member of the animal kingdom - honeybees.

Tim Schuler, a senior animal health technician for the Department's Division of Animal Health, has been named the new State Apiarist as Aug. 20. He takes over the position vacated last spring by the retirement of then State Apiarist Paul Raybold.

"I want to help build up not only the commercial beekeepers, but also the hobbyist, the people who have 50, 60, 70 colonies," Schuler said. "They can take the pollination jobs that sometimes may be too small for the larger beekeeper to do."

The state apiarist aids New Jersey's beekeeping industry by inspecting hives for signs of disease or parasites, ensures that colonies being brought in from other states for pollination work on farms do not bring disease or parasites into the state, and works with educational institutions to encourage more people to get involved in beekeeping.

As for the Colony Collapse Disorder, the mysterious dying off of colonies for no apparent reason that has struck the industry over the past few years. Schuler said he "is more than willing to work with the researchers" in trying various approaches to finding the cause of, and the solution to, the problem. His personal theory is that researchers have been looking too hard for one cause when it is more likely to be a combination of factors.

"It could be nutritional, could be chemical, may be even some viruses," Schuler said. "Over the last 100 years, there have been recorded times of honeybee die-off. It's usually lasted a season, and then things get back on tract."

A past president of the New Jersey Beekeeper Association and current president of South Jersey Beekeepers Association, Tim Schuler holds a bachelor's degree from Delaware Valley College of Science and Agriculture and has studied entomology at Cumberland County College.

New Jersey Secretary of Agriculture Charles M Kuperus said Schuler's years of service in the Division of Animal Health and his previous stint (1989-91) as a Senior Inspector of Bee Culture have equipped him well for the role of State Apiarist.

"With so many of New Jersey's fruit and vegetable crops dependent on honeybees for pollination, ensuring

a robust honeybee industry in New Jersey is a key to successful agriculture," Kuperus said. "Tim's background in our Divisions of Animal Health and Plant Industry, plus his own experience in the honeybee business, makes him ideally suited for this role."

Schuler said he also planned to continue working closely with Rutgers University and the New Jersey Beekeeper Association to expand the highly successful "Beginner Beekeeping" course offered since last year. Those hobbyists, who could also become a key link in the honeybee supply, remind Schuler of his own background and introduction to the industry when he was growing up in Prospect Park, Pa. just outside Philadelphia.

"My dad was a beekeeper, and I learned the business by the school of hard knocks," he said. "When I got out of college, I wanted to do beekeeping. It's something I love."

Honey Recipes

NOTE: Honey should not be fed to infants under one year of age. Honey is safe and wholesome food for children and adults.

Honey Ice Cream

Vanilla

2 cups heavy cream (1 pint)

2 cups half & half (1 pint)

1 cup honey (12 oz. honey = 1 cup)

1 tablespoon vanilla

1/8 teaspoon salt

Mix all - Freeze in cream maker according to manufacturer's directions.

Mint Chocolate Chip

Sub teaspoon peppermint oil for vanilla
1 cup mini chocolate
Fold chips into the mixture after processing
But before hardening

Chocolate Peanut Butter Honey Balls

1 cup honey

1 cup peanut butter (cream or nut)

2 cup powdered milk

1 cup melted chocolate

1 cup confectioners' sugar

1 1/2 cups chopped walnuts (any nut will do)

Mix honey, peanut butter, and powdered milk Together to form very thick mixture. Roll out into small balls about the size of a walnut. Roll in confectioner's sugar. Dip in melted chocolate. Roll in chopped nuts. Place on wax paper and Refrigerate
